a difference of 10% or less between a maximum value and a minimum value of transmittance in the visible light region in the wavelength range of 450 to 650 nm; and
a transmittance of not lower than 50% at a wavelength of 550 nm,
said filter, after being left to stand in the air atmosphere at a temperature of 60°C and a humidity of 95% for 1000 hours, having

a transmittance of not higher than 30% in the near-infrared region in the wavelength range of 800 to 1100 nm, and

a difference of 10% or less between a maximum value and a minimum value of transmittance in the visible light region in the wavelength range of 450 to 650 nm,

said filter having an infrared-absorbing layer on a transparent substrate,
the infrared-absorbing layer being composed of a coloring matter, dye or pigment absorbing infrared radiation and a polymer serving as a dispersing medium and

the transparent substrate having a total light transmittance of not lower than 89%, a haze of not higher than 1.6%, a coefficient of static friction of not higher than 0.6 and a coefficient of dynamic friction of not higher than 0.6.
